

You can analyze your outages geographically.

Outage analyzes are now performed on a location-based basis, not on verbal data, but on a map.

Thematic Analysis

You can perform geographical interruption analyzes on the basis of transformer or feeder.

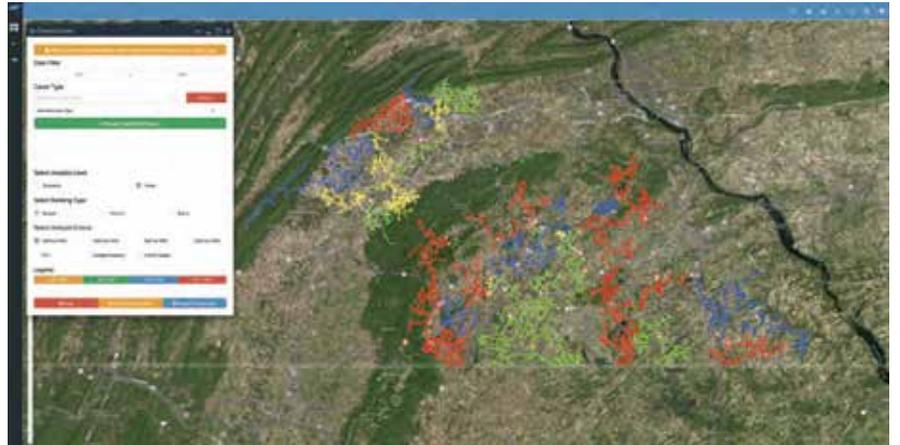

Inventories with the worst and best grades can be analyzed over the interruption information.

You can see the number of interruptions on the inventories in the form of intermittent thematic analyzes.

You can analyze outages with thematic maps over values such as SAIDI, SAIFI, Downtime, and Outage Cost.
